

# Sandhill Crane

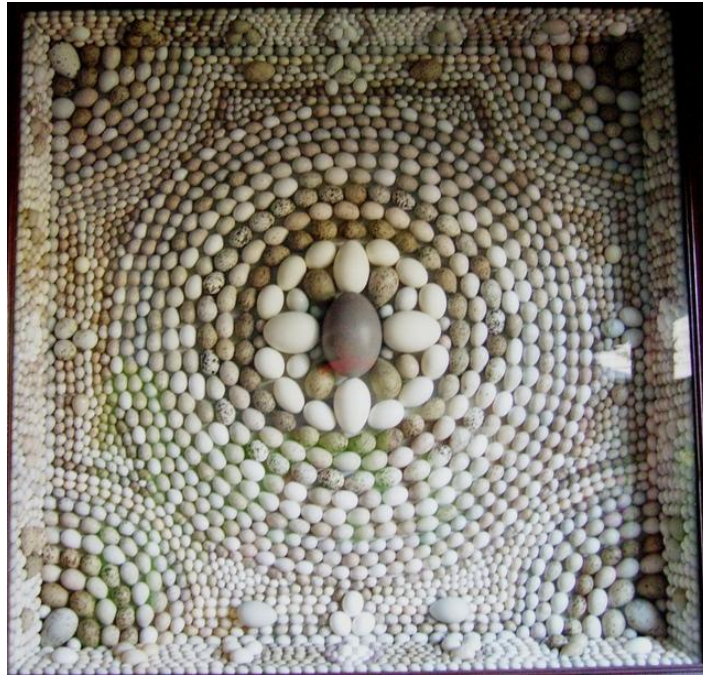

The Sandhill Crane is 34-48 Inches tall. Half of its face is white and half is red. It has long legs and a long neck.

It lives in Mississippi and it lives in water I think but I am not sure.

Her eggs can have spots or no spots. They have interesting nests and eggs.

Here are interesting facts:

#1 Is they have long legs and big feet and they are cool and long neck and that's all I got.
