

Beetles

Beetles have six legs and they are black.
And they have no wings. They have two antennae.

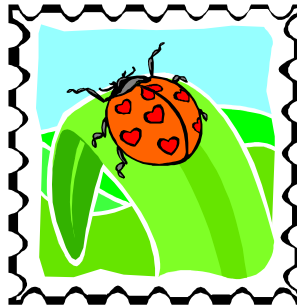

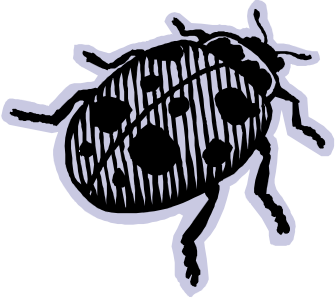

Beetles can live outside of your house or outside of your cousins house or outside the building.

Beetles eat plants and some eat seeds. And many beetles eat plant material. There are some that specialize in eating one specific kind of fungus.

First beetles lay an egg. And then they turn into a larva then they grow into a pupa. Then it turns into an adult beetle.
