

Lady Bugs

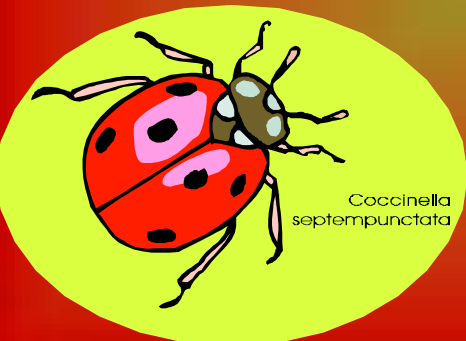

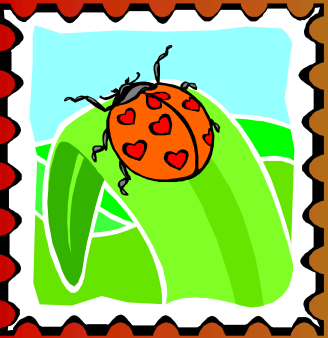

A ladybug has a red back with black spots. They have six legs. And three body parts.

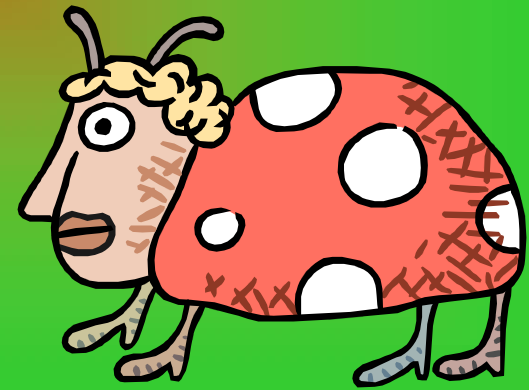

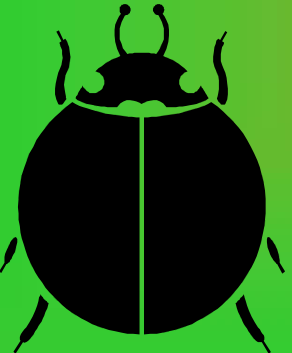

In the fall, ladybugs can be found at the bottom of the trees, under rocks or under leaves. This helps to protect them in the winter. During summer, you can find ladybugs flying and crawling all over.

Ladybugs eat plant lice, mealy bugs, spiders and other small insects. Some ladybugs eat plants and pollen.

A ladybugs eggs can be found on the bottom side of leaf. There will usually be 10 to 50 eggs. The eggs hatch in 3 to 5 days. The larva eats other insects. They are in this stage for 2 to 3 weeks. They then pupate. An adult comes out in 7 to 10 days.

Ladybugs usually live with other ladybugs.
Ladybugs have cool backs. Ladybugs have
awesome spots.
